3.1.4. Manual and Live Demo.....	17

VINALOD application will be available in this URL:

<https://t-barrueco.github.io/vinalod/#>

There are two navigation modes: basic and expert.

1. Navigation basic mode.

This mode is a guided mode. The options (collections) for this navigation mode are shown in a dropdown at the top of the application:

Vinalod

Mode Settings Import/Export Manual and Live Demo

Mode

Chose mode *

Showing graphs in basic or expert mode

☒ Basic ☐ Expert

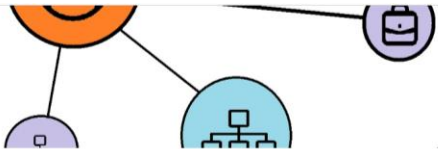

Select a collection *

Chose collection for selecting a graph.

▼

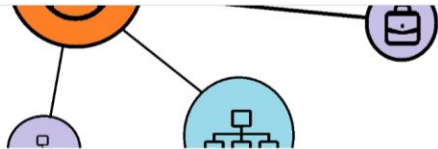

- EU Vocabularies
- EU Whoiswho
- EU Publications
- EU Data
- EU Law

When we chose a collection, all visualisations options for that collection will be shown. For EU Vocabularies:

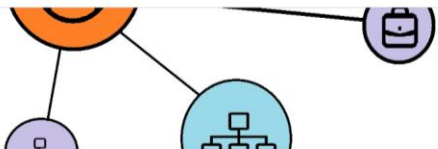

Digital Europa Thesaurus
Digital Europa Thesaurus

[Learn more](#)

NUTS Tree
NUTS Tree (Nomenclature of Territorial Units for Statistics)

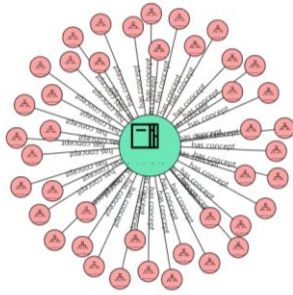

[Learn more](#)

Authority table classification
Authority tables that link to other collections

[Learn more](#)

When the user chose an option, this data visualization will be shown as a network graph:

When more than a data visualization exists for the same collection, we will be able to change the data visualization by choosing it from the drop down menu on the right.

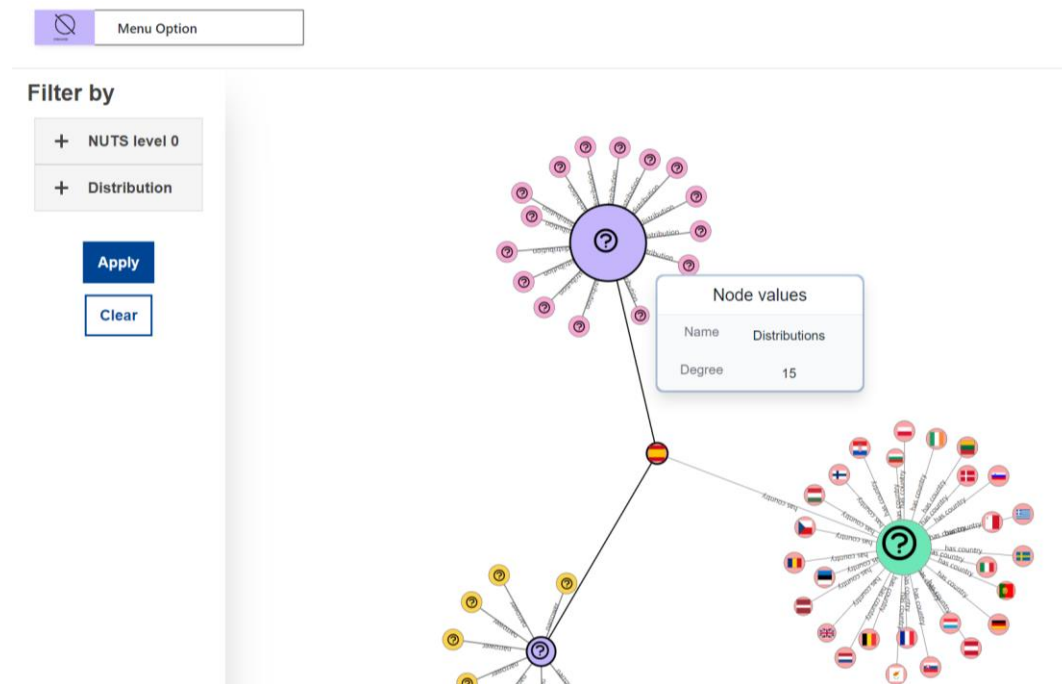

1.1. Double click menu options

We can start the navigation by double clicking on a bubble. If there is more than one navigation path, a contextual menu will be shown:

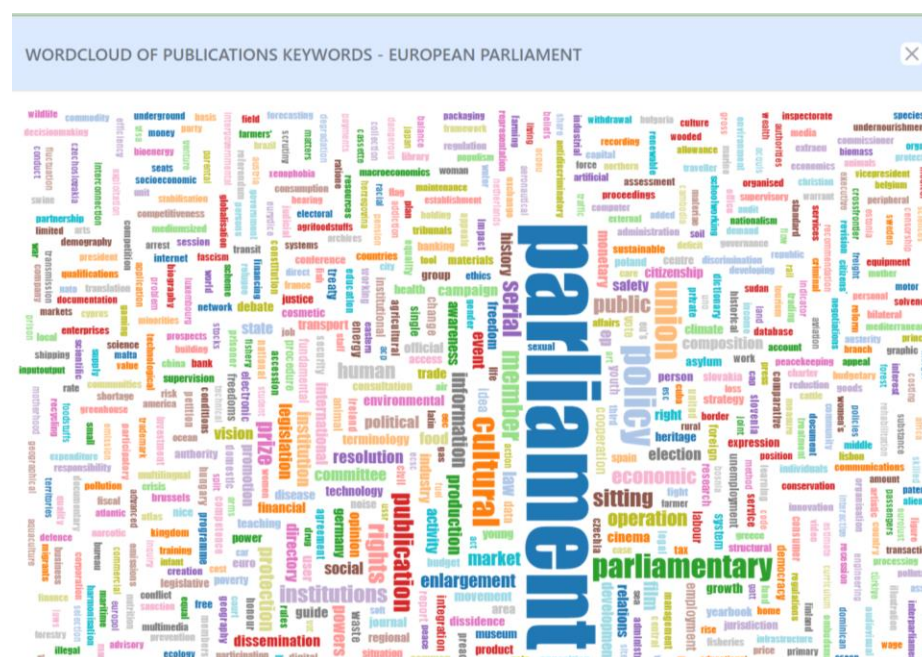

There is an explanation for every option if we move the mouse over the option. If the option that we chose retrieves data with the SPARQL query, this new data will be added as bubbles to the network:

If we chose more than one option for a node, we will have the results split by menu option.

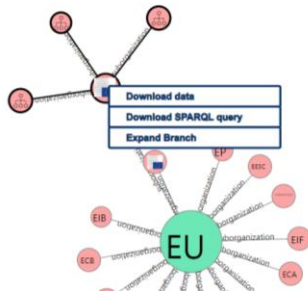

If this option that has been chosen shows a different type of graph from a network graph, this new graph will be shown in a new window. Example of wordcloud:

1.2. Right click menu

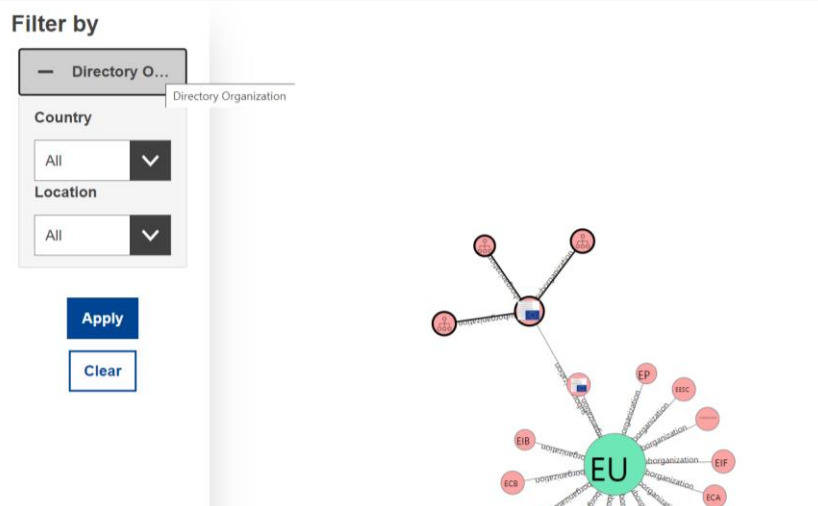

If we click right on a bubble instead of clicking with the left button, a context menu will appear also showing other options:

If we chose Download data a csv file will be created with the data shown in the network graph and if we chose Download SPARQL query we will be able to download the SPARQL queries used for this graph.

1.3. Filters.

If there are filters for the graph they will appear on the left side of the window. If we chose one of the options of the filter, only the bubbles for those values will appear on the graph.

1.4. Navigation panel.

Navigation panel: When we click on a bubble, a window with the detail for the bubbles connected will be shown:

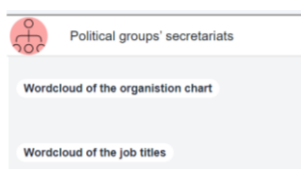

The history for the path followed will be shown on the top of the panel and the options for navigating forward will appear on the table below.

eu Whoiswho Suborganizations	
	PPE: Group of the European People's Party (Christian Democrats)
	The Left: The Left group in the European Parliament — GUE/NGL
	Verts/ALE: Group of the Greens/European Free Alliance
	Renew: Renew Europe Group
	ECR: European Conservatives and Reformists Group
	S&D: Group of the Progressive Alliance of Socialists and Democrats in the European Parliament

We can navigate in the application just by using this navigation panel that will have features as the bubbles in the graph:

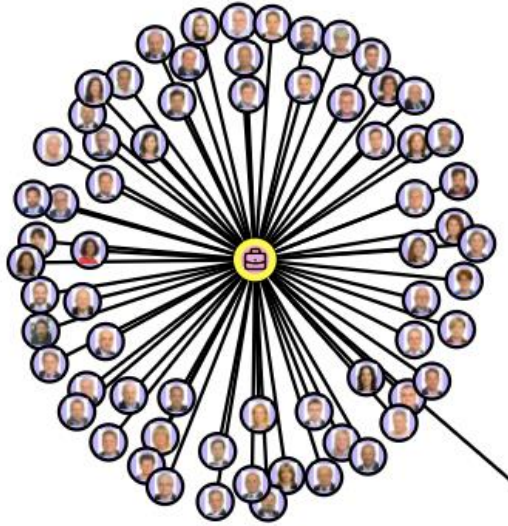

A menu will be displayed when double clicking on a row:

1.5. Examples of navigation:

European Union institutions and bodies > European Parliament > Whoiswho Suborganization > Members of the European Parliament (MEPs) > Parliamentary Committees > Committee on Foreign Affairs > Whoiswho Membership > Members

We will have a branch of bubbles that represent all member of this committee with the photograph:

[European Union institutions and bodies](#) >
 [European Parliament](#) >
 [Whoiswho Suborganization](#) >
 [Members of the European Parliament \(MEPs\)](#) >
 [Parliamentary Committees](#) >
 [Committee on Foreign Affairs](#) >
 [Table membership and persons](#)

A table ordered will appear with all members of the committee with their photograph:

Committee on Foreign Affairs		
MEMBERSHIP	PERSON	PERSON IMAGE
Chair	David MCALLISTER	
Vice-Chair	Urmas PAET	
Vice-Chair	Sergei STANISHEV	
Vice-Chair	Witold Jan WASZCZYKOWSKI	

[European Union institutions and bodies](#) >
 [European Parliament](#) >
 [Whoiswho Suborganization](#) >
 [Members of the European Parliament \(MEPs\)](#) >
 [Parliamentary Committees](#) >
 [Committee on Foreign Affairs](#) >
 [Whoiswho Membership](#) >
 [Members > Michael Gahler](#)

If we chose these options, a Wikipedia page for this member will be shown in a new window:

Michael Gahler

From Wikipedia, the free encyclopedia

Michael Gahler (born 22 April 1960) is a [German](#) diplomat and politician who has been serving as a [Member of the European Parliament](#) (MEP) since 1999. He is a member of the [Christian Democratic Union](#), part of the [European People's Party](#).

2. Navigation expert mode

For the expert mode we will have a form where we fill the URI as our point of start and we have to specify if the URI will be placed as subject in the SPARQL query and we will get all objects and properties or it will be placed as object and we will get all subjects and properties.

Start navigation from URI

Enter URI *

Select subject/object position *

Show

2.1. Pop up menu

When we click on Search and more than one option and SPARQL EndPoints are available, we will be able to chose the one that we want to query from the popup menu:

Option 1

Endpoint URL

URI

Position

Show

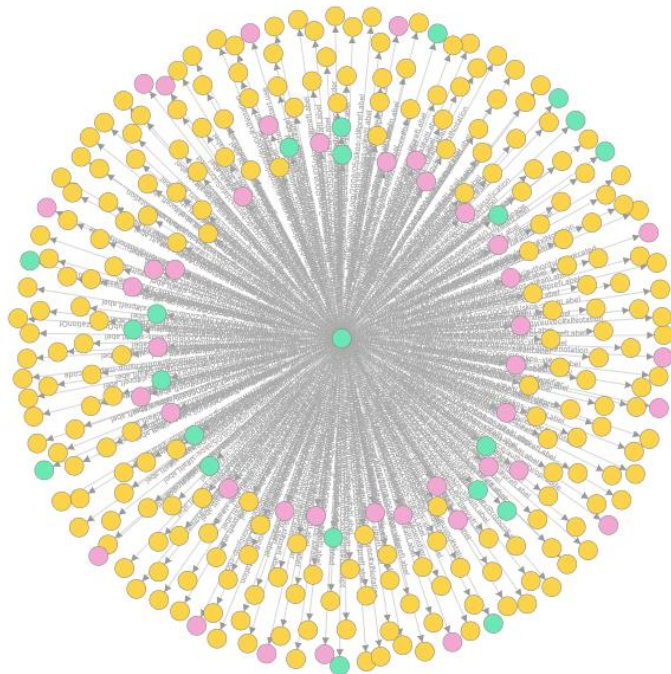

Option 2

Endpoint URL

URI

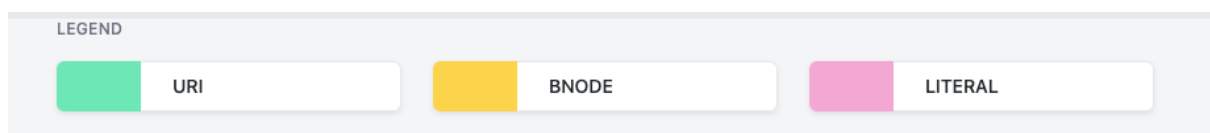

Position

Once we chose one of the options, the graph will be shown:

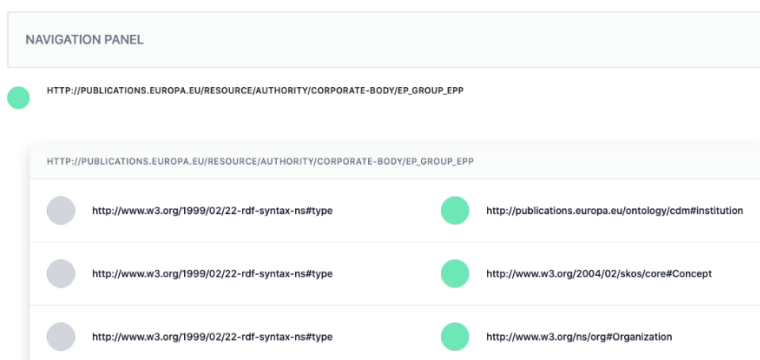

2.2. Legend

As the legend shows we will see URIs, Bnodes and literals in a different color:

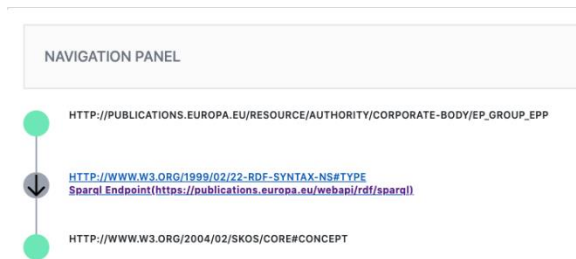

2.3. Navigation panel vs Network graph

In the navigation panel we will have the subject or object nodes resulting from that query and the properties in gray.

In the graph, the properties will be shown as arrows and the nodes will be URIs, Bnodes or Literals.

2.4. Double click menu options

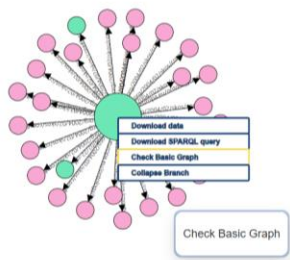

If we have more than one option when we double click on a bubble or row, the options available will be shown for the different SPARQL EndPoints and Position of the URI as subject or object.

2.5. Filters

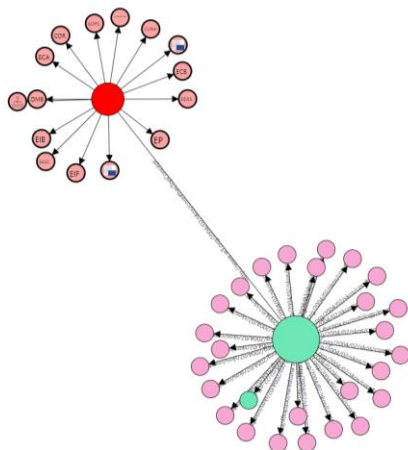

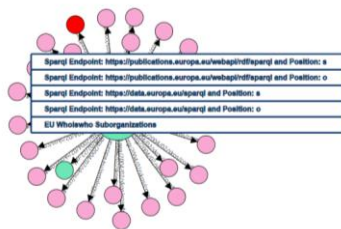

We will have filters available for selecting the properties and node type that we want to show:

2.6. From expert to basic mode.

We can link expert and basic graphs if we check the nodes linked to the parent node. We click on “Check basic graph” and all uris that can be linked to a basic graph will change their color to red.

If we click on the red bubble that links both types of graphs, we will get a new option for the basic graph and if we click on that option, the new branch will be expanded.

3. Top menu options

3.1.1. Settings buttons

3.1.1.1. Collapse/Expand

Max. number of results not grouped in node.

Filter by

- NUTS level 0
Name
+ Distribution

3.1.1.2. Show navigation

We will be able to show the navigation panel every time a branch is added to the graph. If the option is no, the navigation panel will not be shown.

3.1.1.3. Show duplicates.

The graph will be shown as a tree and the nodes will be duplicated for clarity purposes. We can see the graph with no duplicated nodes if we click on the option “Show duplicates No”. We will not be able to see the navigation panel if we chose this option.

3.1.1.4. Max. number of results not grouped.

This is the maximum number of nodes that will be shown not collapsed. If we chose an option that has a number of results bigger than this number, the results will be shown in a collapsed node.

Choose file

3.1.2.1. Share graph.

We can share a graph by email by clicking on this option. Our default email client will be opened with a link to the graph that we want to share.

Para:  cc ycco

VINALOD graph

Follow or copy the following link in your browser in order to see the graph shared

<https://t-barrueco.github.io/vinalod/?graph=pgnzsjzbu4dk92ayx1mjs7.json>

3.1.2.2. Save graph.

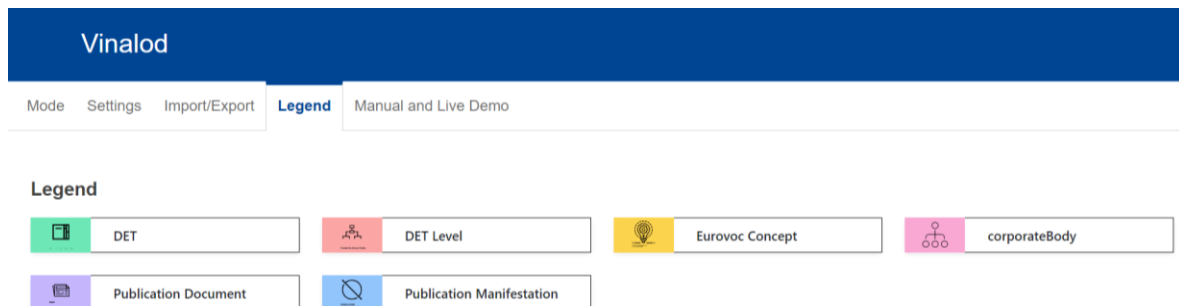

We can save a graph and get it back later with the “Import file” option.

3.1.2.3. Import file.

We can import a file that we have saved with the “Save graph” option.

3.1.3. Legend.

There is a legend on the top of the graph with the colors for every type of bubble in the graph.

3.1.4. Manual and Live Demo.

Option for retrieving this user manual and several demos with graph examples.
